Financials - TBD

Fixed assets / Tax management VAT for assets under construction

VAT is not deductible until an assets is in use. That means that VAT for assets under constructions must be accounted separately as an asset, and when the assets is activated shall the VAT be a part of the VAT declaration.

Requirements

- Invoices with VAT that covering investments in assets under constructions should be managed in a new manner regarding VAT. The VAT accounting is not ingoing VAT, it sholud VAT not yet activated
- When the assets is activated shall the VAT be accounted from VAT not yet activated to ingoing VAT.

Note

The whole VAT amount is probably not deductible in a property, the deductible part is not likely know when the invoices arrives, so the second accounting must cover that part

Value

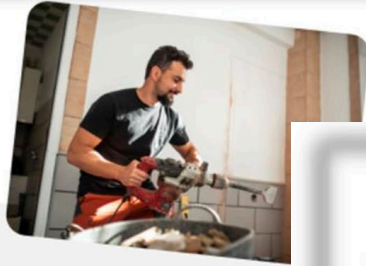

- Increase possibilities to deduct VAT for assets under constructions

Current assets Separate obsolescence accounting at Inventory valuation

One part of inventory valuation is a reservation for obsolescence. It represents the cost for destroyed and lost items in the warehouse. Normally is a % of the net inventory value used to decide the amount.

Requirements

- Create a separate accounting for the reservation for obsolescence

Value

- Enhanced accounting and analysis

Supplier rebate New settlement methods

Supplier rebate is used to keep track off kickbacks from suppliers. Today, the settlement of these transactions is done by the supplier that sends a credit note.

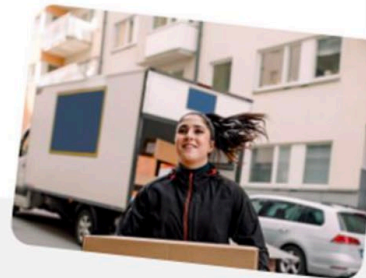

Several companies prefer to be the one that initiate the kickback and that can be done by the two alternatives below

Requirements

- Settle kickbacks via debit notes in Accounts Payable
- Settle kickbacks via customer invoice to the supplier

Value

- Improved control over the settlement process

Customer order / Invoicing Batch order from external systems

Companies using M3 has in some cases the needs to get basis from 3rd part system as input for invoicing, they use M3 as the engine to produce an Invoice.

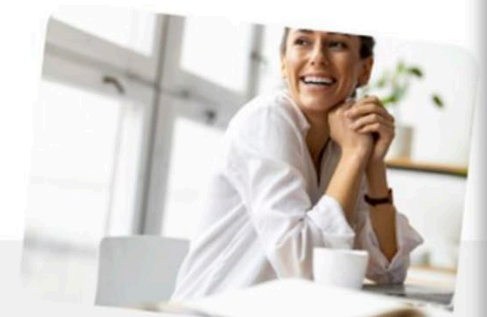

Some of these systems can provide data with pre-accounting of the revenue lines.

Requirements

- Changes in the batch order interface so the accounting information from the 3rd party system can be used.
- Allow a mixture between the accounting information from the 3rd party system and the available accounting options that exists in M3

Value

- Allow accounting strings from 3rd part systems and increase the flexibility in the accounting setup of external orders

M3 CUSTOMER ORDER

Customer Invoicing Mirror accounting

Companies within the same group and shared service has some unique advantages. One is that they share the same chart of accounts. That means that the company that sends an invoice to another company within the same group, can provide the accounting strings for that companies purchase!

Requirements

- Change the invoicing system, so it provides accounting strings for purchase on the customer site.

Value

- Reduce the work with accounting of purchase accounting at the buying side inside a group of companies

M3 FINANCIALS

Shared service Automated jobs per cluster

A shared service would like to work as efficient as possible. Repetitive functions need to be automated and as lean as possible.

Requirements

- Create cluster of companies per function in M3
- Schedule these clusters / function in the job-scheduler
- Introduce an option to start execution without preview/approval of created proposal
