Job Role Based Security

M3 Role based security - Introduction

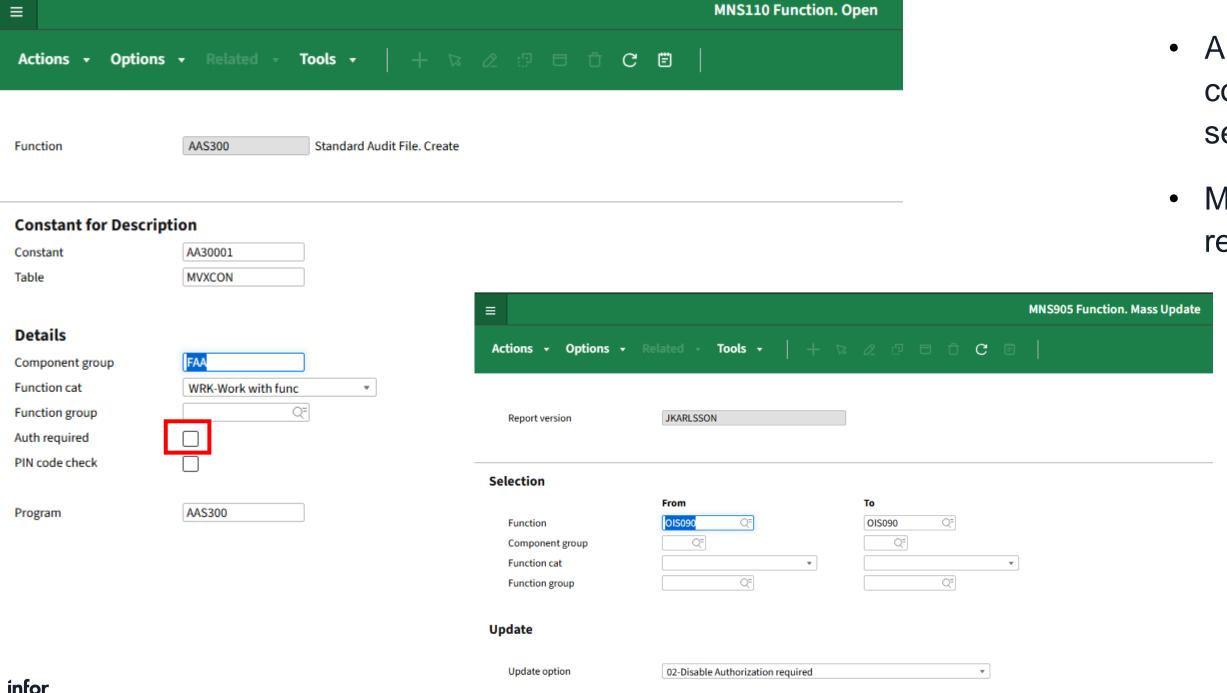

M3 Role based security – Introduction

- Different types of security
 - Company/Division security
 - Data security (object access group)
 - Field security
 - PIN code
 - Role based function security
 - Role based API security
 - Transaction based API security
 - Security audit
 - FAT

- E-signature incl record locking
- GDPR
- Application message authority
- Keystore management
-
- Documentation

- Security Administration
 - API Security
 - · Application Message Authority
- Connect User to User Group
- · Company and Division Security
- Connect User Group to Object Access G
- Create a Function
- Create a PIN Code for a User
- Create a User
- Create a User Group
- Create Object Access Group
- · Data Authority Security
- Defining Access to Information in M3
- Define Check of Information Access for F
- · Define Company and Divisions
- Field Access Security
- Field Audit Trail
- + Functions that Use Fields with Object Ad
- + Function Security
- + General Data Protection Regulation (GD
- Keystore Management
- Manage E-Signature
- M3 BE Security Model Overview
- Object Access Control
- Record Locking
- Security Aspects of M3 Business Engine
- Security Audit

MNS110 - Function

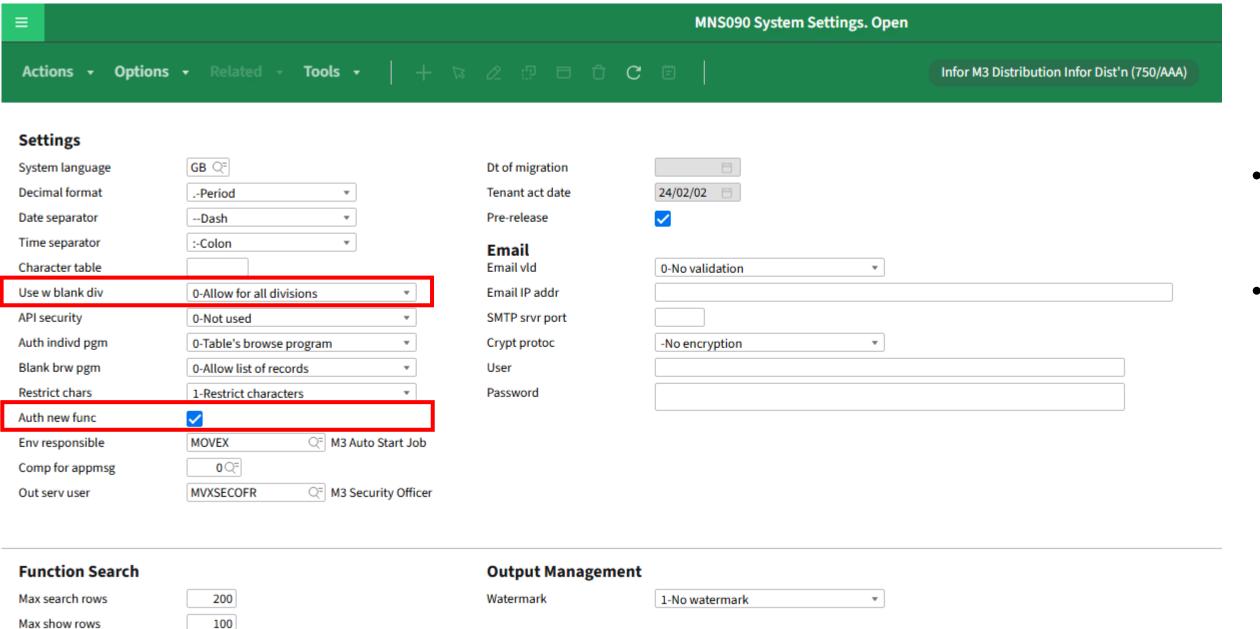

- Auth required controls how/if security settings are used
- Mass update of "Auth required" = F16

M3 Role Based Security

M3 Role based function security

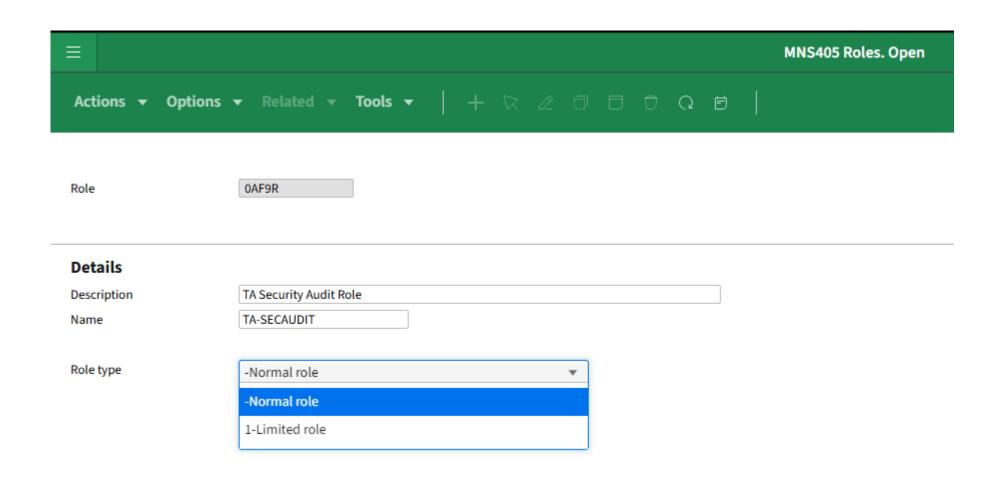

M3 Role Based Function security – General settings

- Blank division control
 blank division
 means all or blank?
- Adding new functions => protected or open?

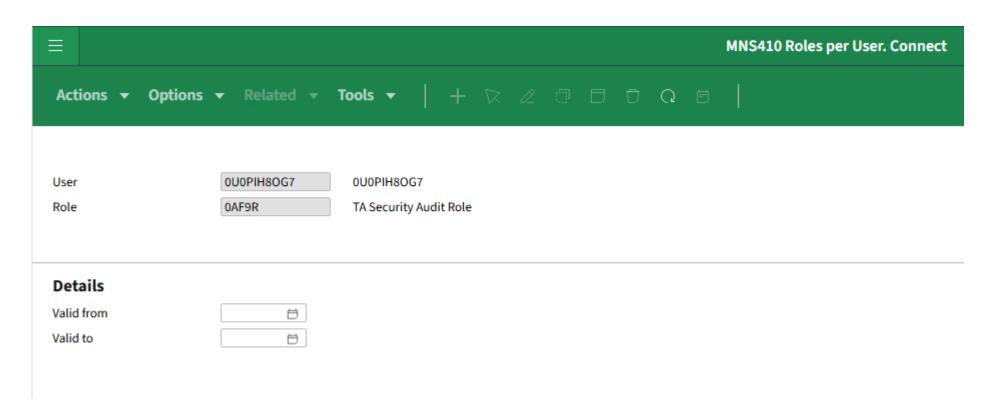

M3 Role Based Function security – Roles

- Define your roles
- Limited role is used together with License type 2 (Limited user)
- Option 22 generate functions in SES400

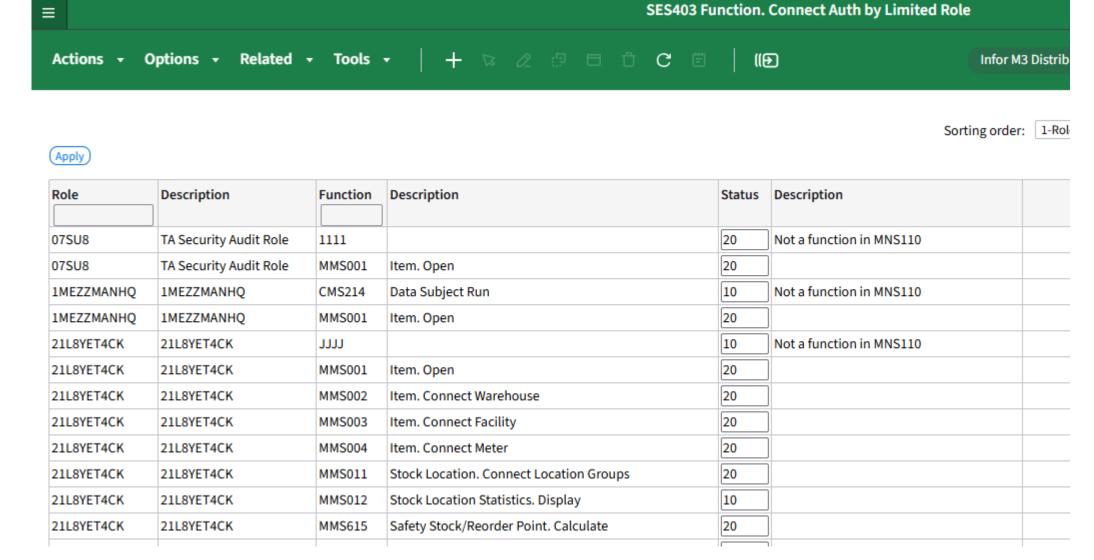

M3 Role Based Function security – Roles/user

- Connect user to your roles
- Limited role can only connect to limited users (license type 2)

M3 Role Based Function security – Limited Roles/Function

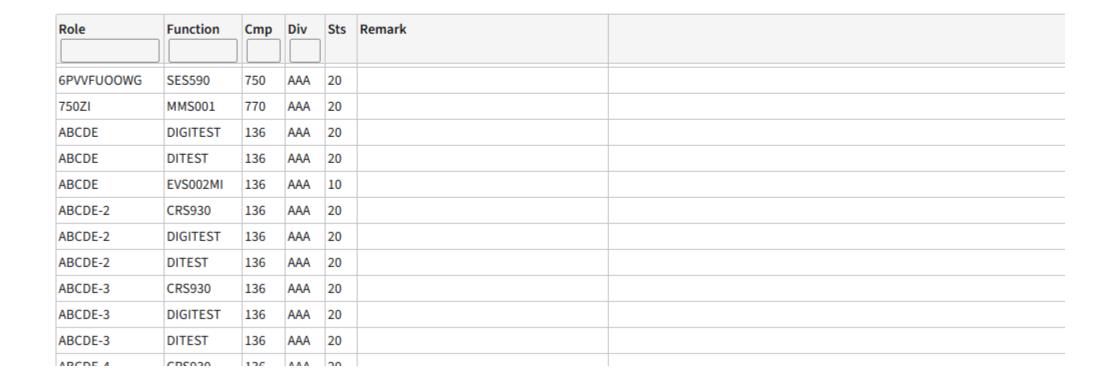

- Connect functions to your limited roles
- Status 20 = Active

M3 Role Based Function security – Role/Function

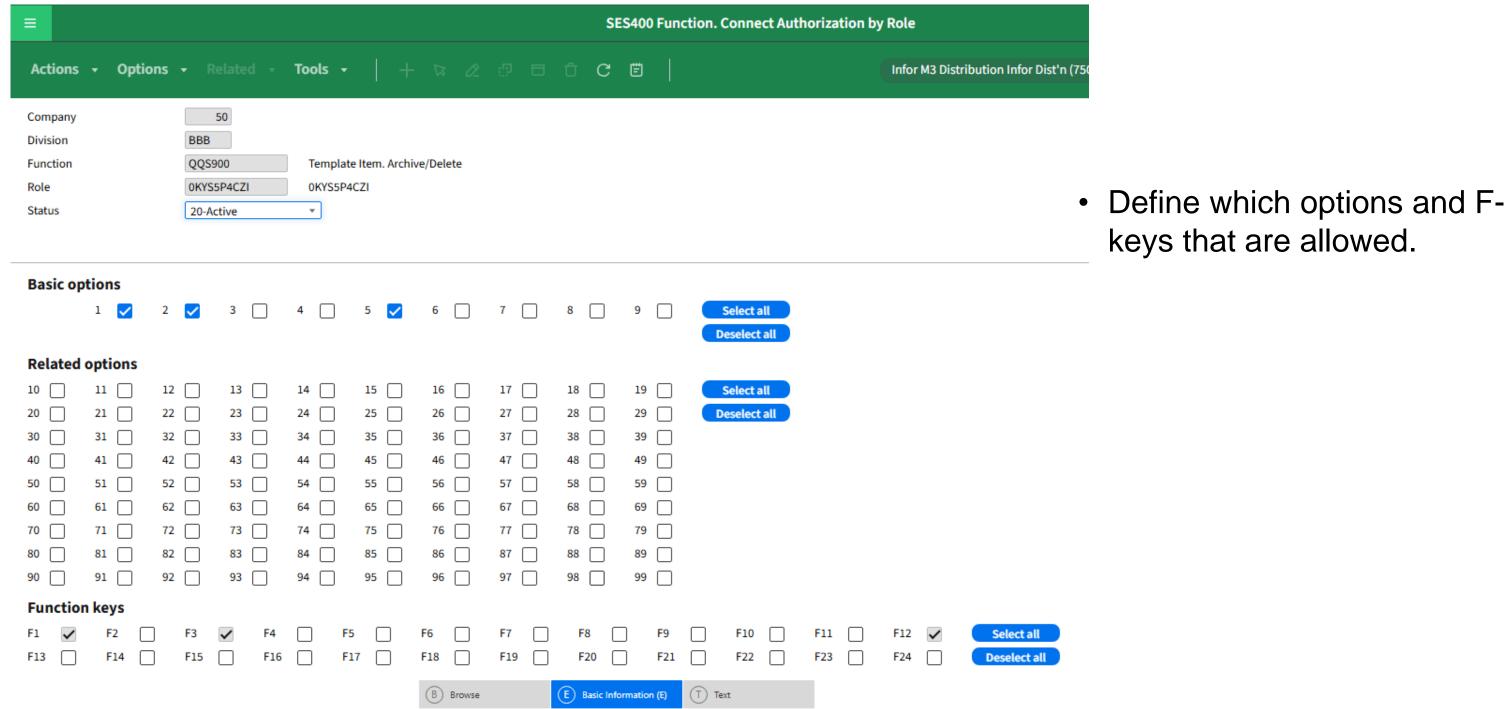

- Connect functions to your roles
- Blank division is dependent on setting in MNS090 (see previous slide)

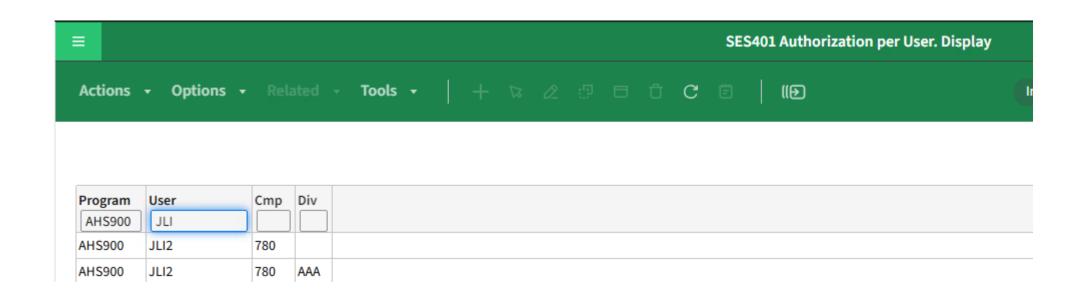

M3 Role Based Function security – Role/Function

keys that are allowed.

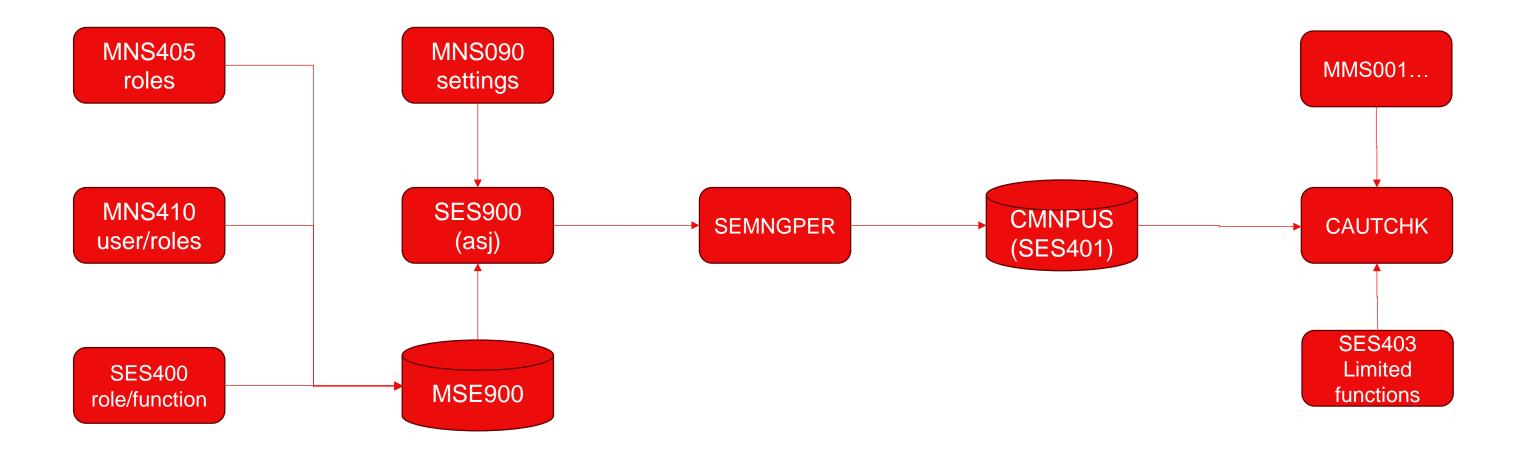

M3 Role Based Function security – Function/User

- Contains the <u>authority result</u> from the auto job SES900 per user.
- Performance reasons but also easier to understand.

M3 Role Based Function security - Overview

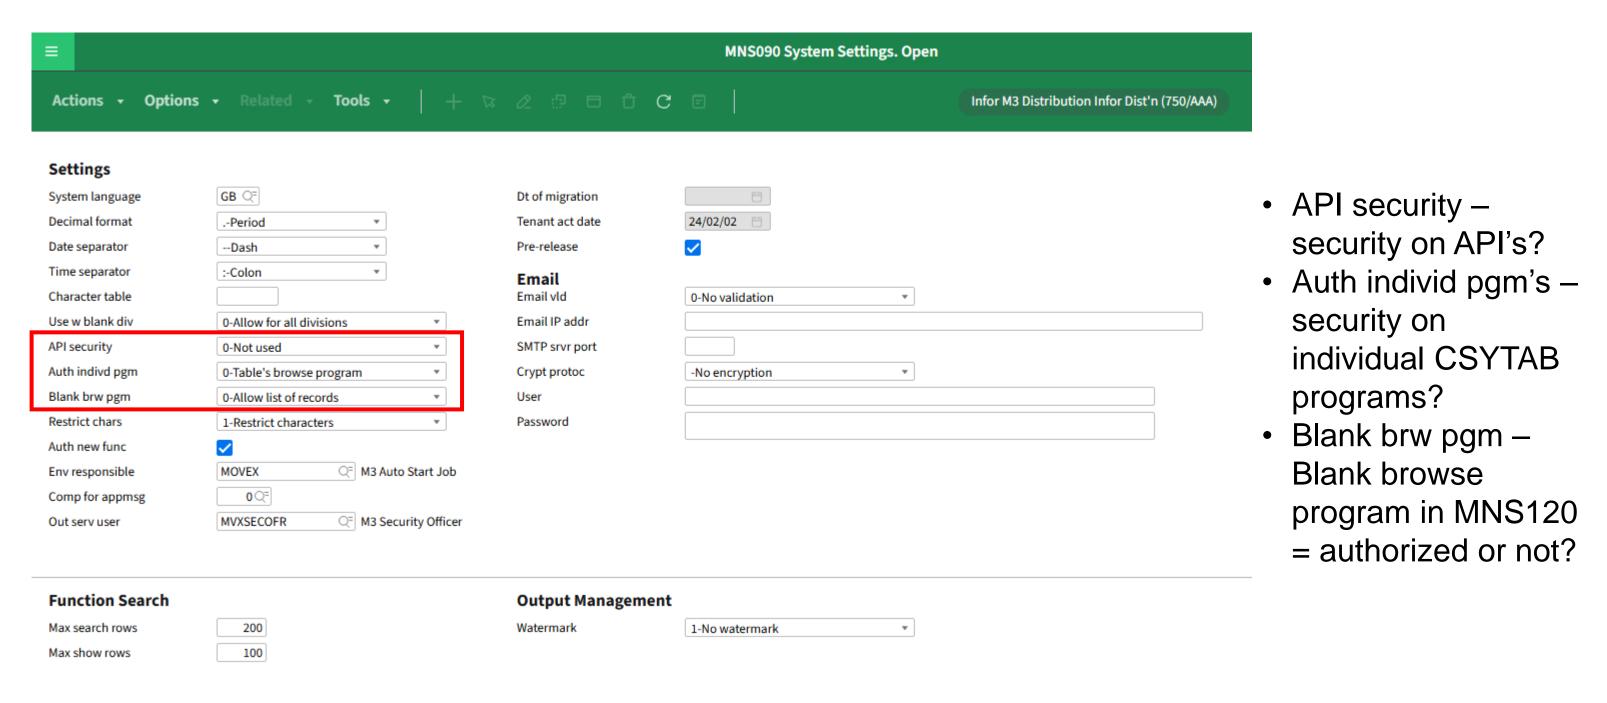

M3 Role Based Security

M3 Role based API security

M3 Role Based API security – General settings

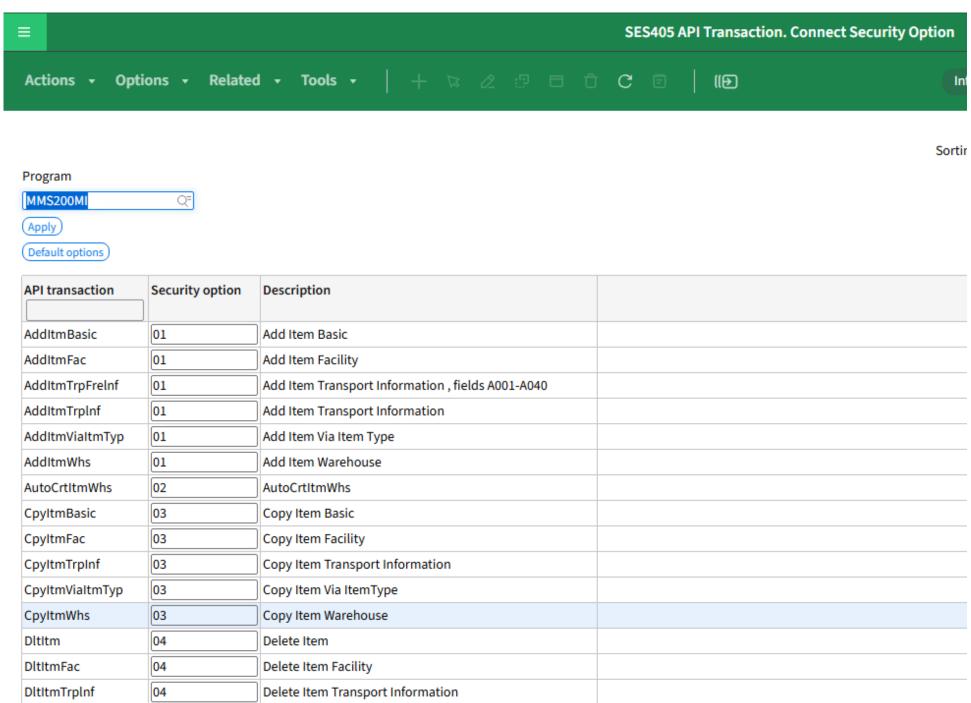

CMS100MI, EXPORTMI, MDBREADMI

- Checks authorization via Browse program in MNS120.
- For CSYTAB you can define which MNS120 record to be used i.e. the one for CSYTAB or for each individual program.

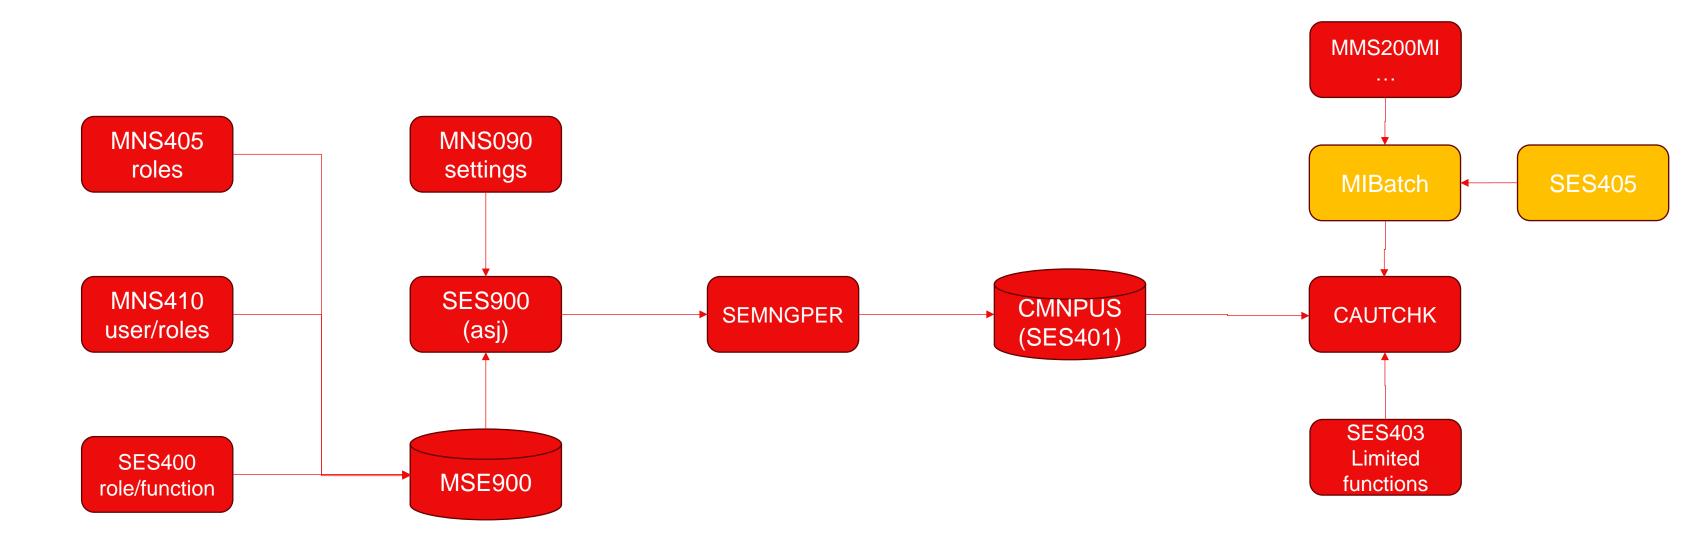

M3 Role Based API security – API transaction/option

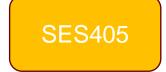

- Connects your API transaction to an option.
- F18 generate all std API transactions with a best guess option
- Option 00 or ** = Always allowed

M3 Role Based API security - Overview

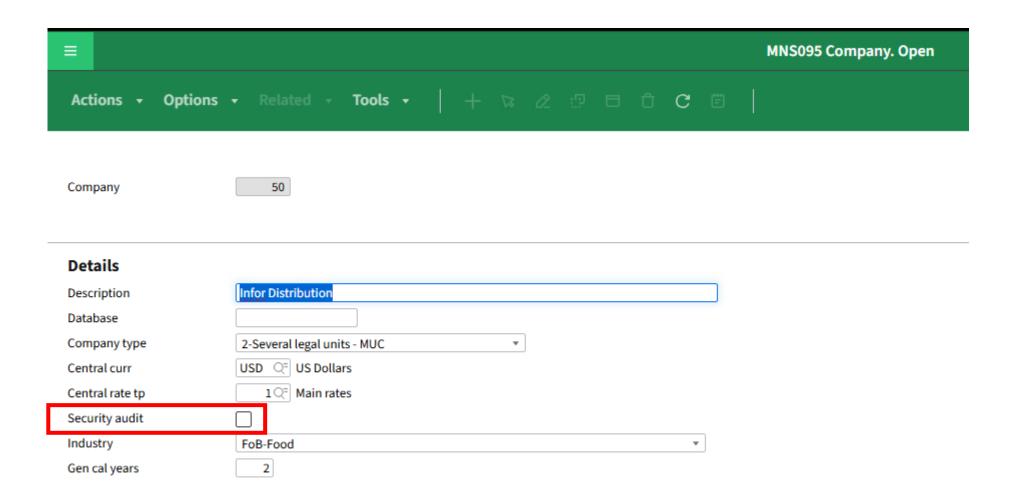

M3 Role Based Security

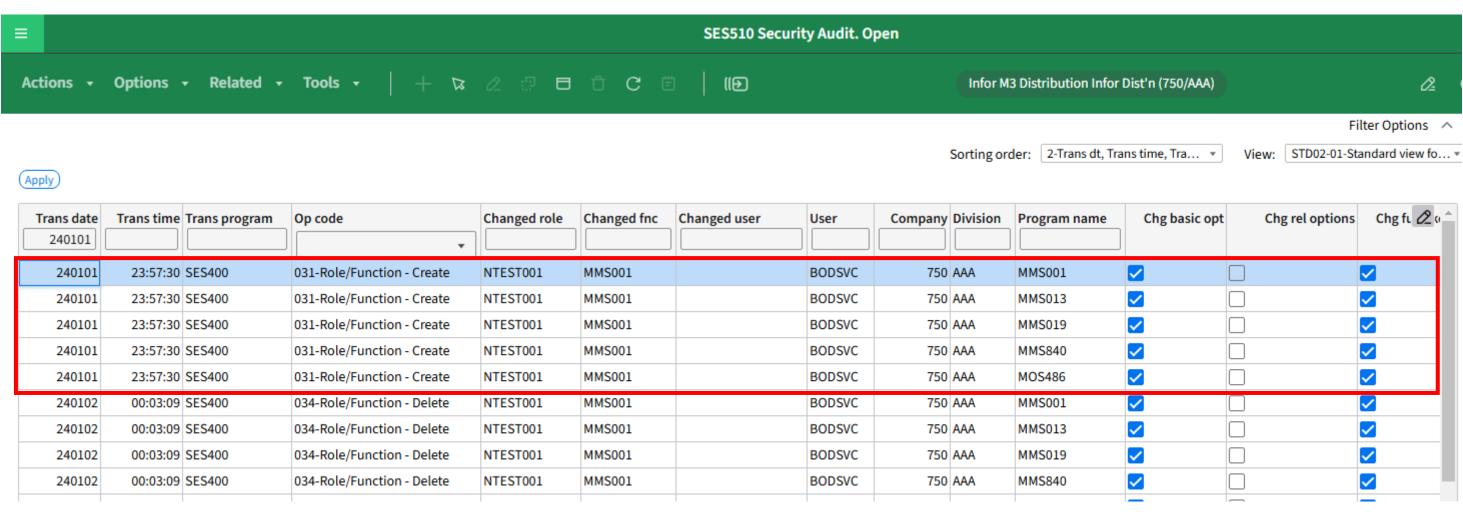

M3 Security audit

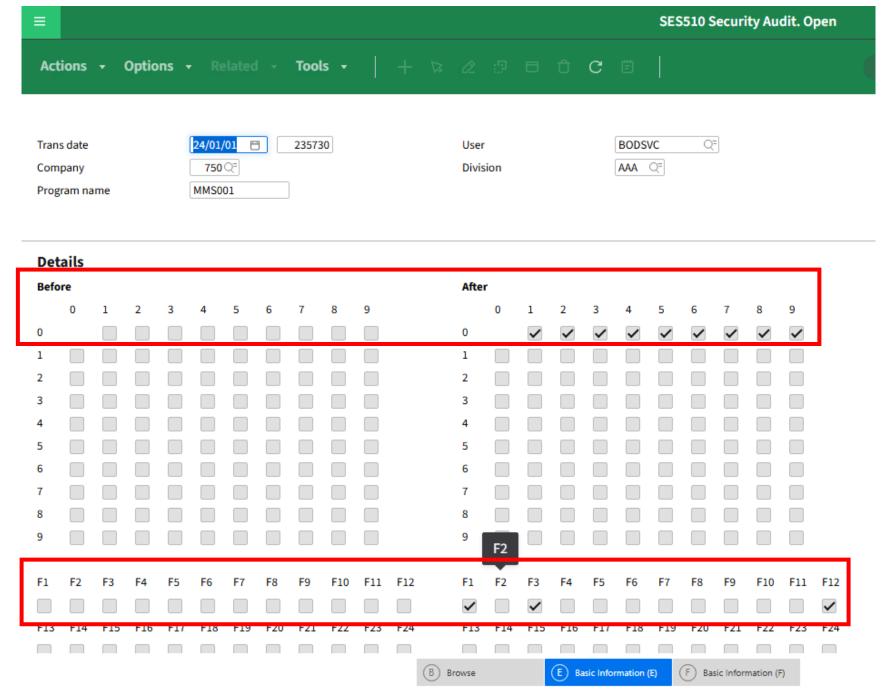

- The usage of the security audit functionality is controlled via MNS095 "Company".
- Why not using FAT?
 FAT gives you a way to log the changes to the set-up, but security audit logs the impact that a set-up change has on the authority.

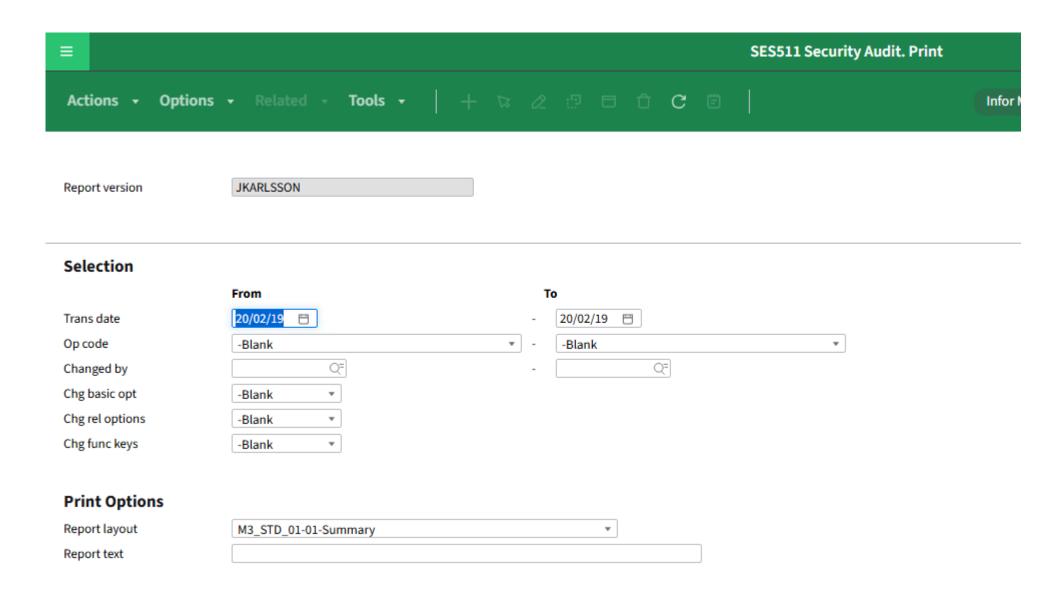

Several views, here you can e.g. see which programs was changed, what was changed, what was the
effect etc.

 Details of the effect it had on the authorization.

• Possible to print the result.

 Note, I've removed some user id's.
