Infor CloudSuite

Purpose-built solutions

Industry-specific applications

- Fully integrated core ERP suite
- Supporting edge applications i.e. PLM, WMS, CPQ, HCM etc
- Consumer-grade user experience

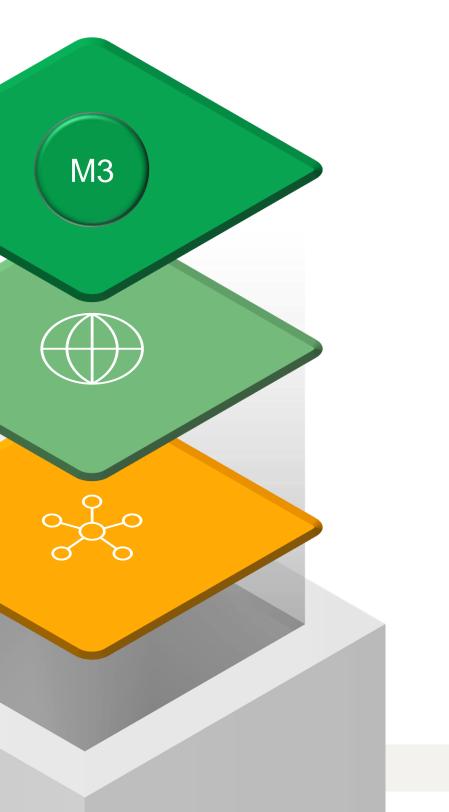

Digital business platform

- Integration and interoperability
- Common data fabric
- Visualization of data and insights
- Business process automation
- Extensibility for new applications

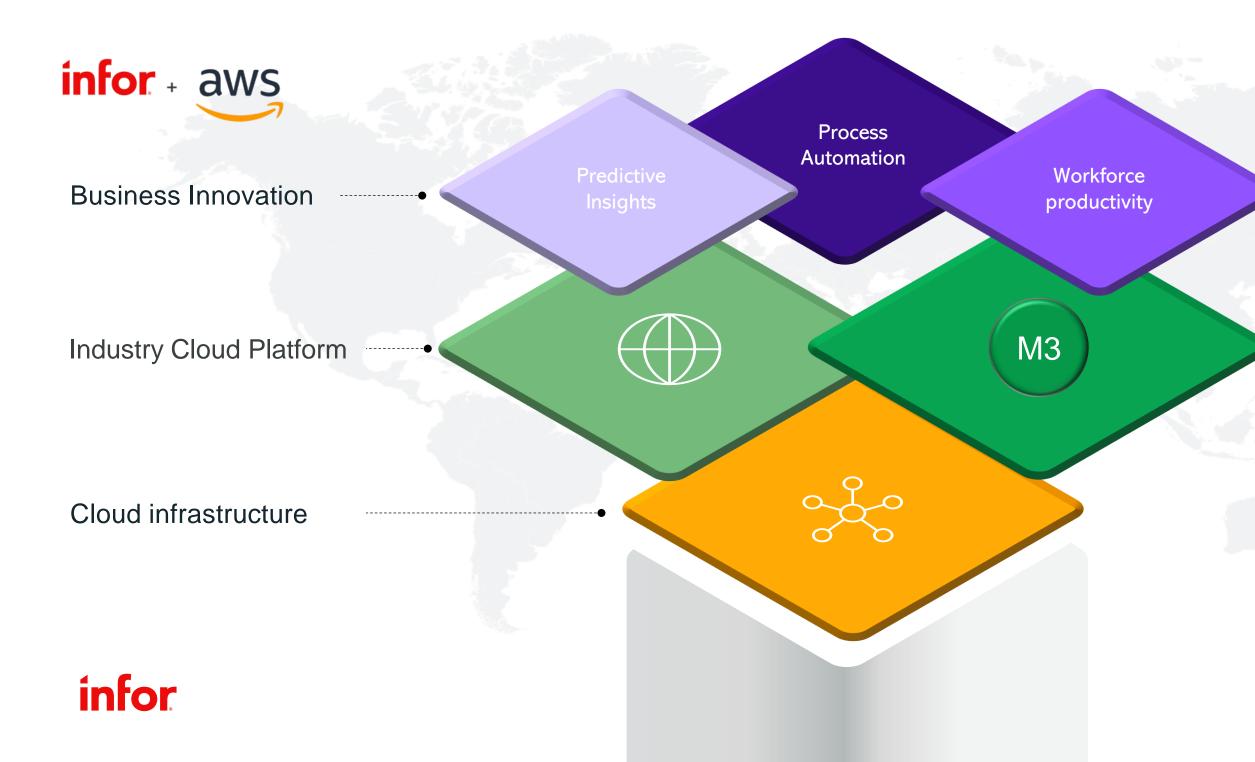

Multi-tenant cloud infrastructure

- Partnership with AWS global network
- Resilient and scalable architecture
- Secure and compliant protection
- Evergreen innovation and improvement

Infor Digital Transformation for Business Infrastructure, platform and business applications, all integrated into a single solution

Industry ERP/Apps

Companies can strategize accordingly.

Delivery Admin Workbench

Executive summary

An SDK application for space optimization of deliveries / shipments.

Problem

To identify if a delivery is fully utilized in terms of space is a cumbersome process in standard M3.

Solution

An SDK solution where the user can review deliveries using filters

- From / to date
- Route
- Shipment number

The deliveries are displayed in a datagrid. A calculation is done to see if the delivery is a full pallet. This data is shown in a column in the datagrid and is also visualized graphically (load / volume / weight).

The main objective is to ensure that we fill the pallets and fill the truck to obtain logistical efficiency.

Benefits

A timesaving application for the warehouse logistical planner.

Dock Planning

Executive summary

An application for planning and allocation of time at the loading docks for your warehouse. Supports both inbound and outbound shipments.

Problem

There is no dock planning solution in M3 currently.

Solution

An H5 SDK application displaying the loading docks for a specific warehouse and time period, and the shipments that are available for scheduling.

Quick links and filtering allow you to narrow down the shipments displayed. Drag and drop of shipments allow you to reschedule your shipment as well as change load platform.

Outbound shipments, inbound supplier delivery notes and inbound shipments are supported.

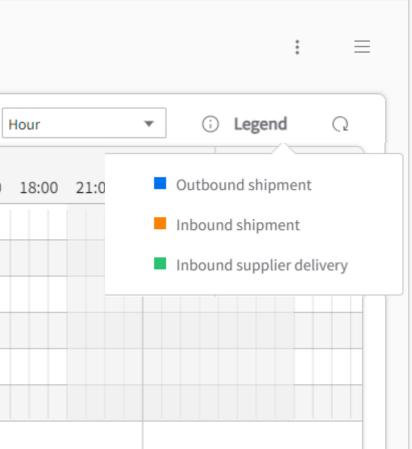

Benefits

The application renders a great visualization of the warehouse shipments and allows the user to easily plan and allocate load platform time.

Freight Rate Shopping

Executive summary

An application for retrieval of real-time shipping options and freight rates from multiple carries, allowing the user to select the most suitable combination of delivery method and freight cost for a customer order. Find the best shipping rates from USPS, UPS, FEDEX, DHL and 100+ carriers, using EasyPost (3:rd party service).

Problem

Currently there is no way to retrieve up-to-date carrier freight costs in M3

Solution

A new H5 SDK app that is displayed in a modal dialog on the OIS100 I-panel.

The from- and to-address is retrieved from the CO as well as the total weight of all items on the order. Next, a call is done to the EasyPost API (via ION API) and the freight rates for the different carriers are returned. Additionally, the addresses on the order are validated.

A cross-reference table is used to map the EasyPost delivery method to the M3 delivery method / route, which are returned to the M3 panel when the dialog closes.

Benefits

A solution that allows for real-time shipping options / freight rates which is a must-have in todays just-in-time world

Supply Chain Risks

Contextual widget designed to generate supply chain risk summaries for selected items using generative AI.

Risks are programmatically calculated and analyzed based on specific conditions. A Risk JSON object, along with a configurable prompt, is sent to the AI.

The AI is intended to provide a summary of the risks only. It is not recommended to ask the AI to perform its own analysis due to the high risk of hallucinations.

infor

Project Executive Summary

Executive summary

A contextual widget that takes a snapshot of a project and uses Infor GenAI to generate a summary of its status / progress.

Problem

Getting an overview of a project and how it is progressing requires the user to navigate multiple M3 programs / panels to find the information.

Solution

A widget that retrieves relevant project data from different M3 tables and sends the information to Infor GenAI, which then reviews and summarizes the data and returns it in a format that it easy to view and understand for the end user, highlighting possible issues and bottlenecks.

The summary is added to a PDF that is uploaded to IDM and connected to the project.

Benefits

Provides the user with a quick overview of the project status, providing insights and highlighting potential problems.

Project Executive Summary

Project Overview:

My Widgets 👻

The Dakota Bar and Grill project (Project ID: P70198) commenced with various activities planned to achieve the project's objectives. The project includes tasks such as Plumbing Plan, Electrical Plan, Building Work, Plan Details, and Equipment Installation, among others. The project's execution is ongoing, with several activities yet to start or finish.

Status:

As of the current date, several key activities have started but are not yet completed. These include Plumbing Plan (J100), Electrical Plan (J110), Building Work (J120), and Equipment & Install (R11). Notably, the Equipment Installation (R112S) and Final Invoice Activity (920) have not commenced, indicating potential delays in these areas.

Performance:

The project's performance can be assessed by examining the progress of individual activities. For instance, the Building Work (J120) has a remaining amount of \$6,000, suggesting that it

Performance

Project Performance Data

Executive summary

A contextual widget for displaying various KPIs for a project.

Problem

Project KPIs are not easily identifiable / visible in M3, requiring the user to navigate through many different M3 programs / panels to find the information.

Solution

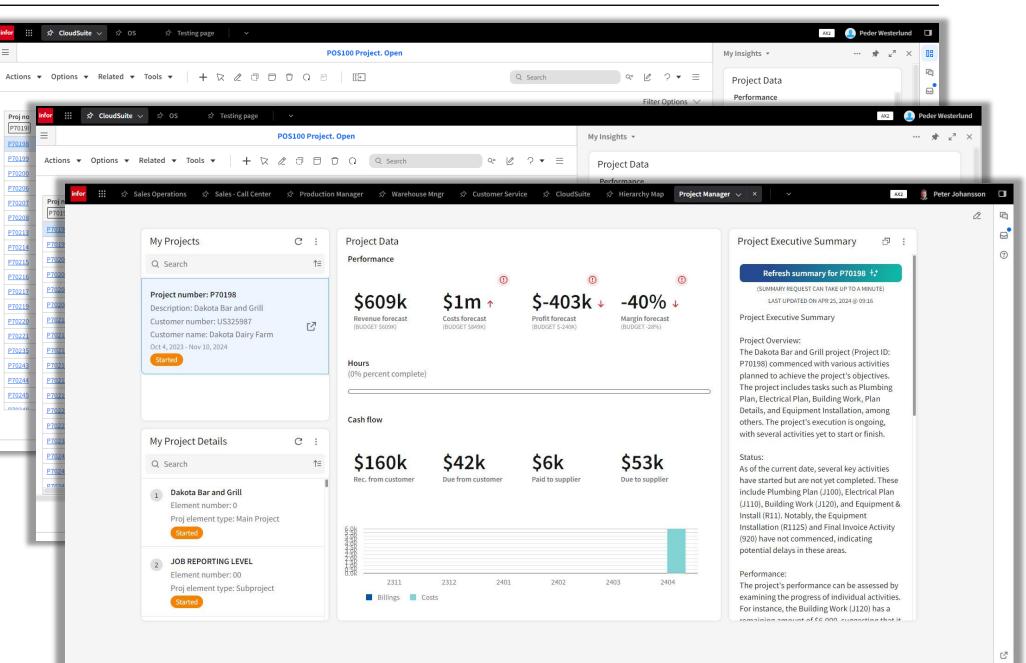

A widget displaying project KPIs. Specifically, the following indicators are supported:

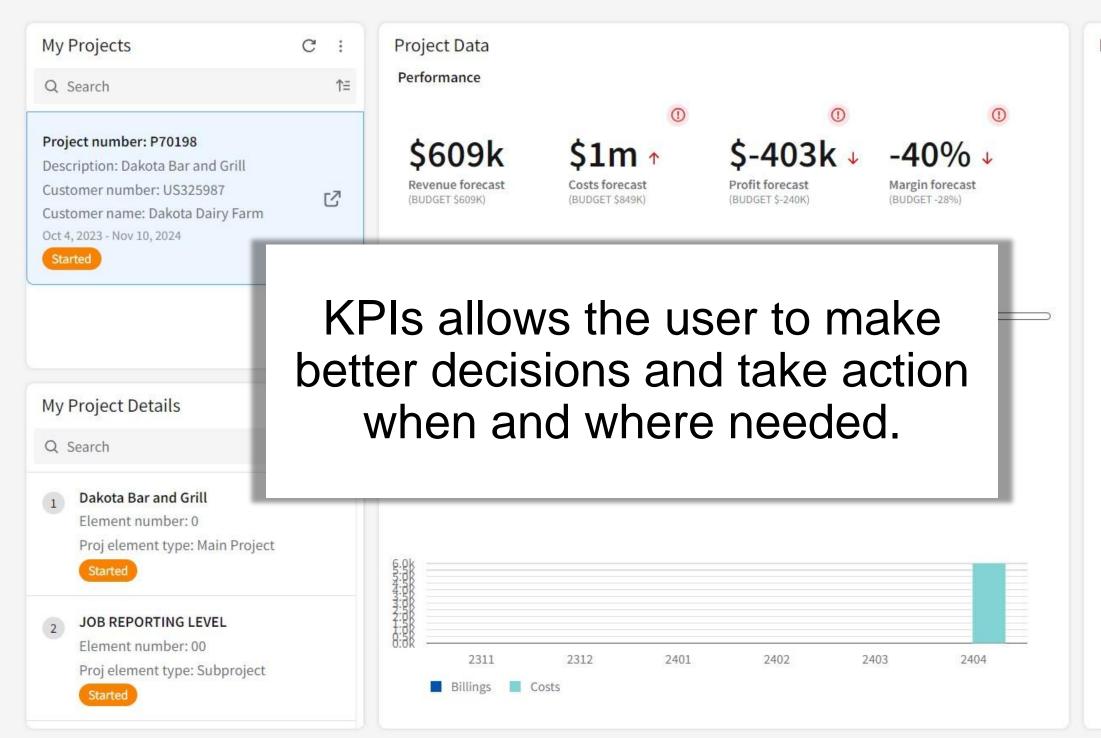

- Revenue
- Actual vs budget
- Cost. Actual vs budget
- Profit ٠
- Margin
- Cash flow. Revenue and cost.

Benefits

KPIs allows the user to make better decisions and take action when and where needed.

For more information, visit Demo Showroom or Infor Oxford

Project Executive Summary

Project Overview:

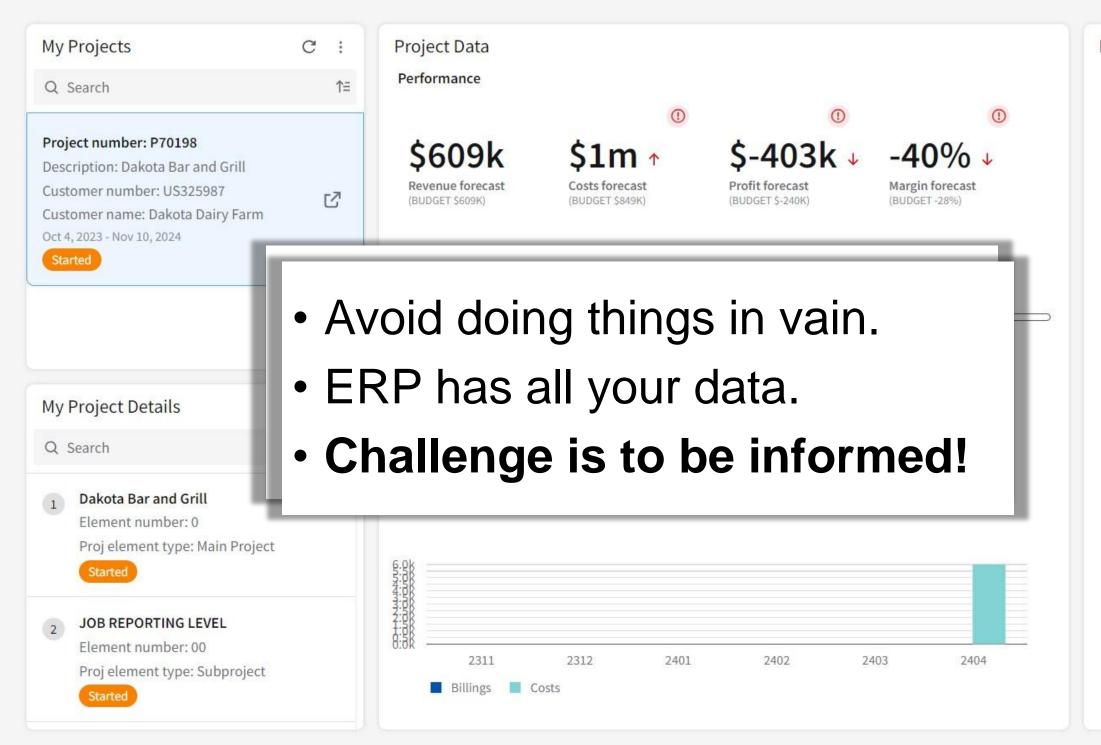

The Dakota Bar and Grill project (Project ID: P70198) commenced with various activities planned to achieve the project's objectives. The project includes tasks such as Plumbing Plan, Electrical Plan, Building Work, Plan Details, and Equipment Installation, among others. The project's execution is ongoing, with several activities yet to start or finish.

Status:

As of the current date, several key activities have started but are not yet completed. These include Plumbing Plan (J100), Electrical Plan (J110), Building Work (J120), and Equipment & Install (R11). Notably, the Equipment Installation (R112S) and Final Invoice Activity (920) have not commenced, indicating potential delays in these areas.

Performance:

The project's performance can be assessed by examining the progress of individual activities. For instance, the Building Work (J120) has a romaining amount of CC 000 cuggosting that it

Remittance from PDF

Executive summary

An ION script / H5 script / widget combo, allowing for easy entry of AR payments.

Problem

Adding payments received manually takes time, is "boring" and it is easy to make mistakes.

Solution

A contextual widget that uses Infor GenAl to extract remittance amount information from a PDF and add them as payments received in program ARS112.

Functionality wise it is similar to the Items From PDF solution in that it consumes a PDF document, extracts the necessary information and then adds them to an M3 entry panel.

Benefits

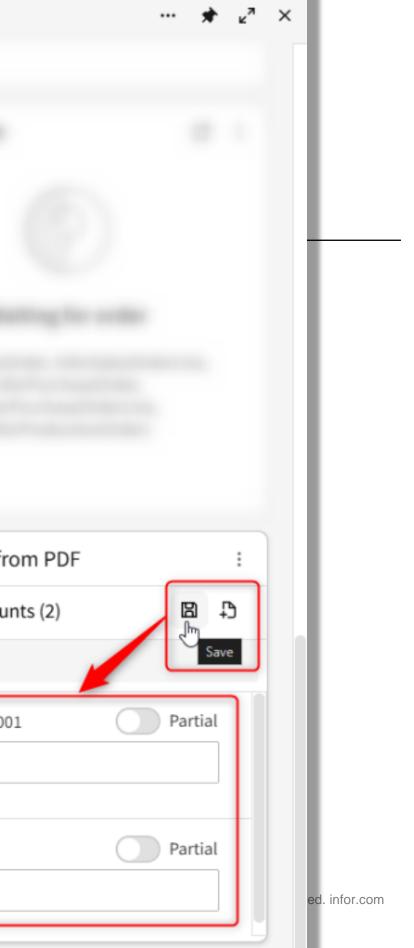

infor

Using automation reduces risk of human errors and is much quicker. This solution will be especially useful in the US market where a lot of payments are still manually processed.

Call Center & CLM Integration

Executive summary

This widget has been around for a while. In this latest version, we have added a real-time integration to CRM/CLM. As the Customer Service Representative (CSR) ends the call, they can now add information about the call and have this added to the Customer Notebook in CLM.

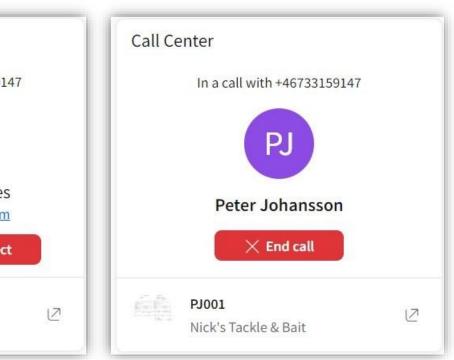

SC Champion: Mikael Forsman

Problem Call Center Call Center It can be a challenge for Customer Service Representatives Incoming call from +46733159147 (CSR) to navigate several applications screens while being on the phone with a customer. PJ Solution Peter Johansson **Director**, Demo Services Waiting for call This solution provides easy access to all related customer peter.a.johansson@infor.com information and can now also add Notes in to CLM directly from the widget. Reject Accept Benefits Peter Johansson PJ001 17 Not only will this streamline customer service, by being Nick's Tackle & Bait pjohansson@m3demo.onsip.com able to be proactive with customer. But also, in a single step be able to record what that call was about!

Limitations

This solutions is interfacing to a 3rd party VoIP provider called OnSip. To use this widget, an OnSip account must be available to use.

Enhancement: Call Center, CLM Integration & GenAl (POC)

What if we add some Generative AI?:

- The conversation, between customer and CSR, is recorded. ٠
- When the call ends, the recording is sent to OpenAl for ٠ transcription. The entire conversation (word by word) is returned to the widget.
- The widget sends full transcription to OpenAI asking for a ٠ summary.
- The summary is presented to CSR so they can check and ٠ adjust as needed.
- When SAVE is clicked, the summary gets created as an ٠ Activity in CLM
- The CSR can now open CLM and make further adjustments ٠ as needed.

Note:

The recording is not saved. The transcript is not saved. Only the summary of transcript is saved. That said, there are legal and policy implications to consider, but at this point, we are simply evaluating the technology to see what can be done.
